

Sources of the magnetic field

~~moving charges~~

Biot-savart law

⇒ moving charges causes magnetic field

$$\vec{dB} = \frac{\mu_0}{4\pi} \frac{I \, d\vec{s} \times \hat{r}}{r^2}$$

μ_0 = permeability of free space
 $= 4\pi \times 10^{-7} \frac{\text{TM}}{\text{A}}$

⇒ Biot-savart law

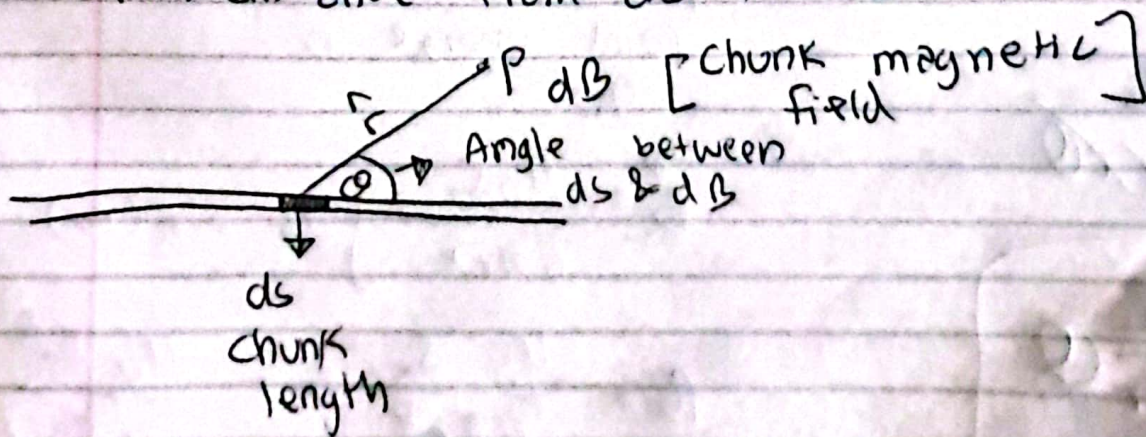

Chunk
magnetic
field

$$= \frac{\mu_0}{4\pi}$$

Current I passing through a segment of wire $d\vec{s}$
 $\times \frac{d\vec{s} \times \hat{r}}{r^2}$

⇒ I = current passing through a segment length $d\vec{s}$

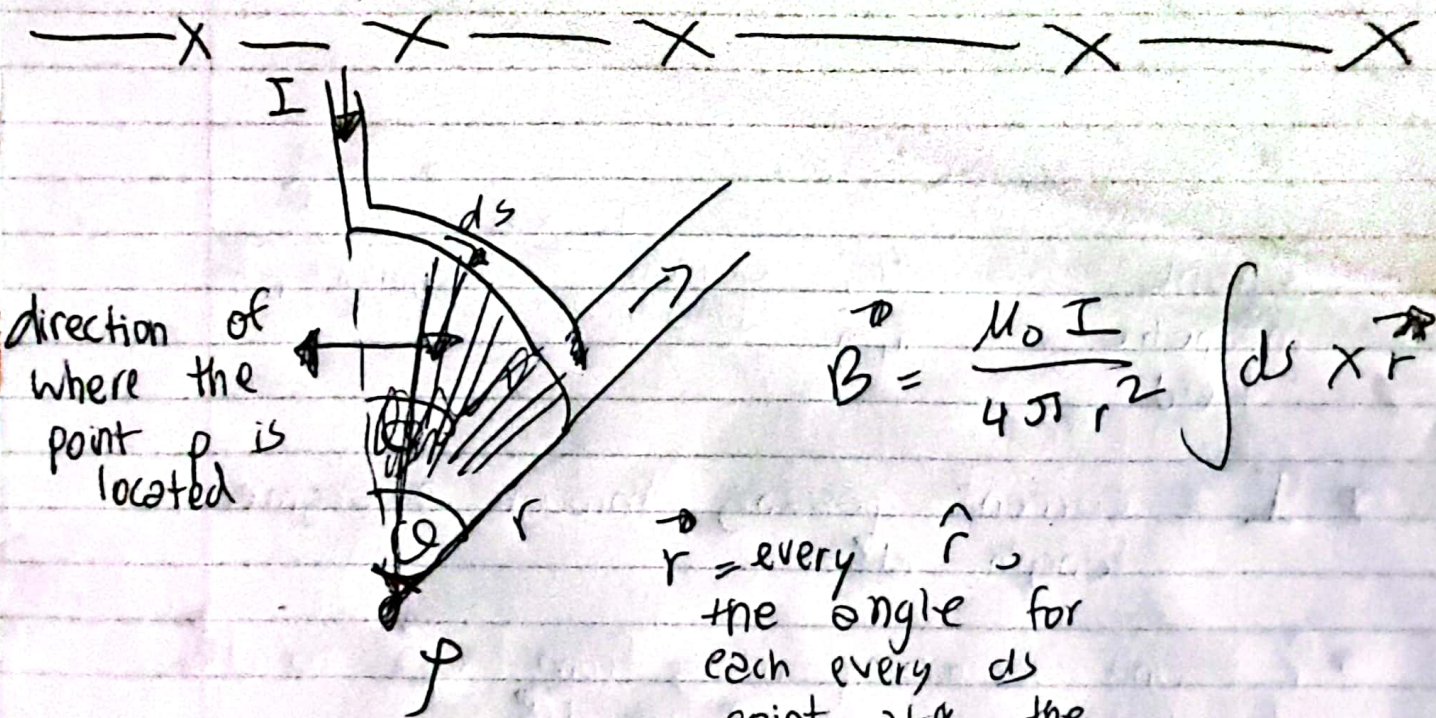

⇒ \hat{r} : unit vector pointing from $d\vec{s}$ to $d\vec{B}$
 r^2 : distance from $d\vec{s}$ to $d\vec{B}$

⇒ To find the total magnetic field

$$\int dB = \int \frac{\mu_0 I d\vec{s} \times \hat{r}}{4\pi r^2}$$

$$B = \frac{\mu_0 I}{4\pi} \int \frac{d\vec{s} \times \hat{r}}{r^2}$$

$$B = \frac{\mu_0 I}{4\pi r^2} \int ds \times \hat{r}$$

→ \hat{r} = every \hat{r} the angle for each every ds point at the point charge is 90°

$$S = \frac{\mu_0 I}{4\pi r} \times Q$$

$$B = \frac{\mu_0 I}{4\pi r} Q$$

$$B = \frac{\mu_0 I}{4\pi r^2} \int ds \sin(90)$$

$$B = \frac{\mu_0 I}{4\pi r^2} S = \frac{\mu_0 I}{4\pi r^2}$$
